

Want the chance to work on large enterprise-level projects for leading global organisations?

We currently have an exciting opportunity for a permanent, full-time Web Developer to join an experienced team of developers working on a range of Web Applications Developer with commercial experience in ASP.NET and MVC (C#) and experience in building enterprise-class web technologies such as HTML, CSS, JavaScript, JQuery etc.

It would also be highly beneficial if you have experience with popular CMS platforms such as Kentico, Umbraco, Sitefinity or Sitecore. We specialise in CMS-driven digital marketing and e-commerce solutions such as ASP .Net, C# Applications and Kentico CMS.

Our projects range from custom corporate web portals, e-commerce implementations to complex enterprise solutions. Our work often takes us all over the World!

We want to hear from enthusiastic and highly capable developers with a track record of successful delivery. If you want to constantly learn and evolve with us then here's your chance!

Our weekends start at 1pm on a Friday!

Requirements:

In an ideal world, you would have experience with the skills listed below. However, if you only have some of these but are a problem-solving, proactive problem solver, be sure to get in touch!

2-4 years' commercial experience in MVC, ASP.NET (using C# & .Net Core)

HTML, JavaScript, JQuery, CSS, XML & AJAX

Good people skills

Knowledge of CMS platforms such as Kentico, Umbraco, Sitefinity or Sitecore

Entity Framework

Database management

Knowledge of IS

Databases

Front-end and back-end web development

Parsing and processing data files into a large database

Writing optimised database queries

Improving functionality and fixing bugs in existing systems and client management systems

Liaising with other team members

Making design improvements & tweaks to existing systems

Prioritising workload and researching best practices for future developments

Benefits

32 paid holiday days (including Public & Bank Holidays)

Summer and Christmas Bonus

Paid Over-Time

Flexible Working Hours

Flexible company with dynamic work from home options

4.5-day working week

We will invest in your training to achieve professional growth and development

Contributory Pension Scheme

Private Health Plan

Life Insurance Plan

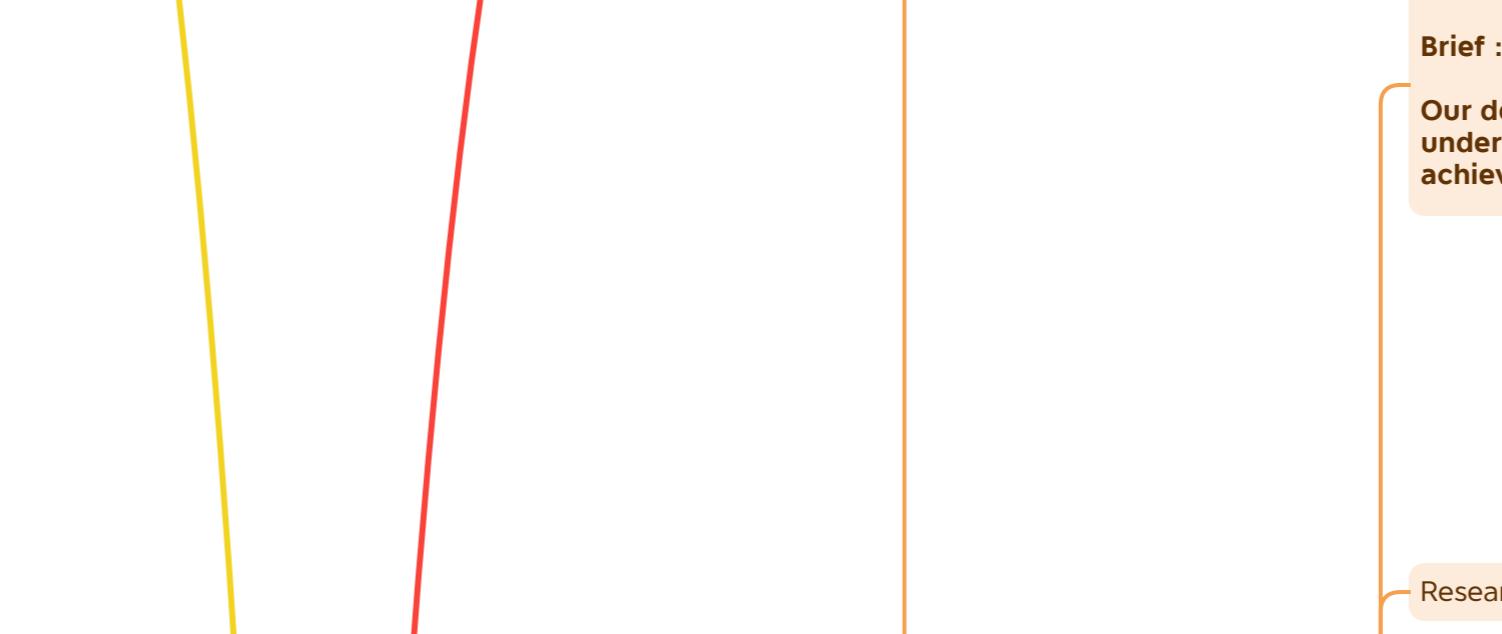

Free Car Parking (when in the Office)

Join our creative and friendly team

Careers

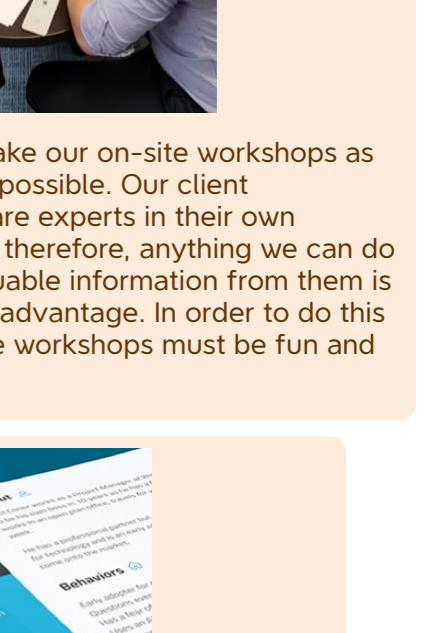

Brief :

Whether you're starting from scratch, looking to make a commercial website or migrate to a new platform, we have the team and skills to meet your needs.

/services/user-experience-design

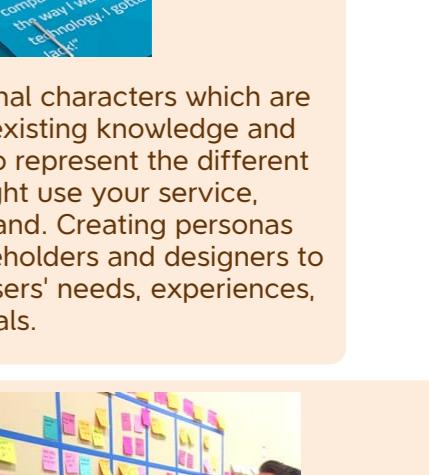

Brief :

Our design process ensures that we understand the needs of your users whilst achieving your key business goals.

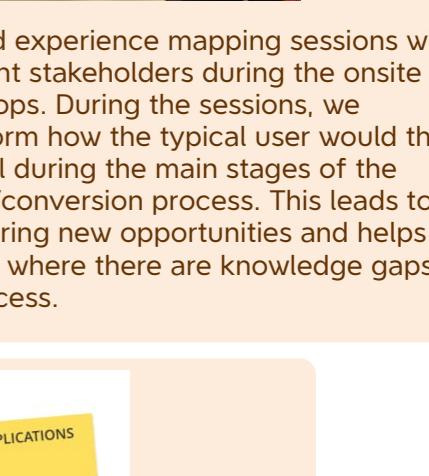

Research & Discovery

Research and discovery are fundamental to user-centered design. By understanding your users needs and frustrations, we gather information from stakeholders and also gather real user data to expose issues and hypothesize ways in which we can improve overall user experience.

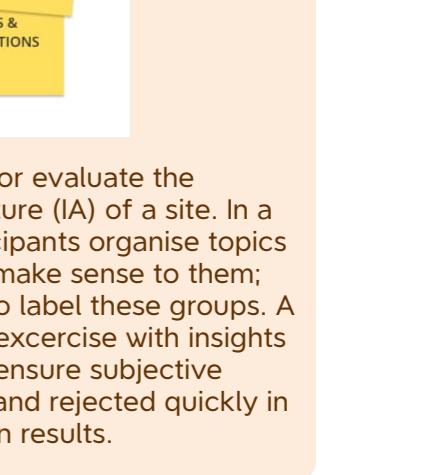

On-site Workshops

We try and make our on-site workshops as interactive as possible. Our clients range from small to large multinational organisations, therefore, anything we can do to extract valuable information from them is to our clients advantage. In order to do this effectively, the workshops must be fun and engaging.

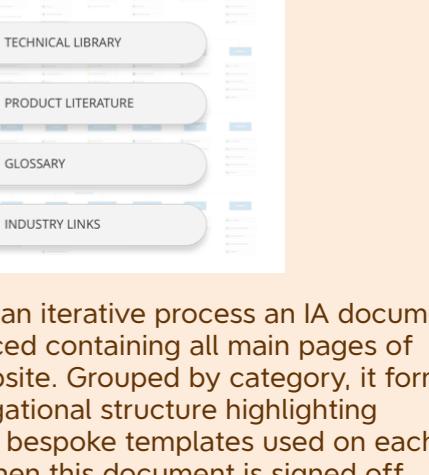

User Personas

Personas are fictional characters which are created based on existing knowledge and research in order to represent the different user types within a product, service, product, site, or brand. Creating personas will help stakeholders and designers to understand your users' needs, experiences, behaviours and goals.

User Experience Mapping

We hold experience mapping sessions with the client stakeholders during the on-site workshops. During the sessions, we break down what type of user would think and feel during the user journey to the buying/conversion process. This leads to identifying gaps in the user journey to help identify where there are knowledge gaps in the process.

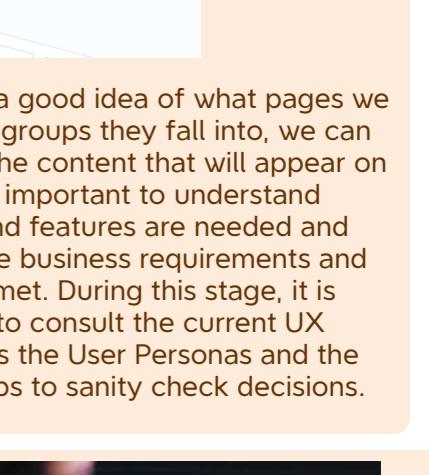

Card Sorting

Used to help design or evaluate the information architecture (IA) of a site. In a typical session participants organise topics into categories. The results of the session may also help to label these groups. A highly collaborative exercise with insights gathered from the user's objective, opinion is identified and rejected quickly in favour of data-driven results.

Information Architecture

Through an iterative process an IA document is produced containing all main pages of your website. Grouped by category, it forms the structure hierarchy and intended bespoke template used on each page. When this document is signed off, wireframing and design concepts can commence.

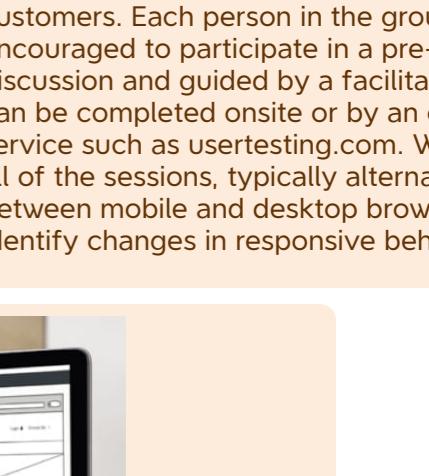

Content Structure

Once we have a good idea of what pages we need and what groups they fall into, we can then dive into the content structure on each page. It is important to understand who the user is and what they want and ensure all of the business requirements and user needs are met. During this stage, it is also important to take into account A&F. Findings such as the User Personas and the Experience Maps to sanity check decisions.

Focus Groups & User Interviews

We use focus groups as a research method to gather feedback and opinions from customers. Each person in the group is encouraged to speak openly and share their ideas and opinions. They may also help to label these groups. This can be completed onsite or by an online service. We record the sessions to record all of the sessions, typically alternating between mobile and desktop browsing to identify changes in responsive behaviour.

Wireframing

In order to communicate user journeys and showcase early designs ideas, we sketch first and foremost on paper. Rather than introducing aesthetics, it is the content that has priority at this stage. We find this allows for more freedom of expression and experiment with the placement of features. It also illustrates content and user flow as part of early interactive testing.

Concepts & Prototyping

Using our key page wireframes the next stage is to create high-fidelity designs. These help visualise the look and feel of the site. Brand guidelines establish colour, typography, accessibility requirements and more. These requirements also influence our decision making at this stage. We iterate and share our designs with our stakeholders in order to gain valuable feedback.

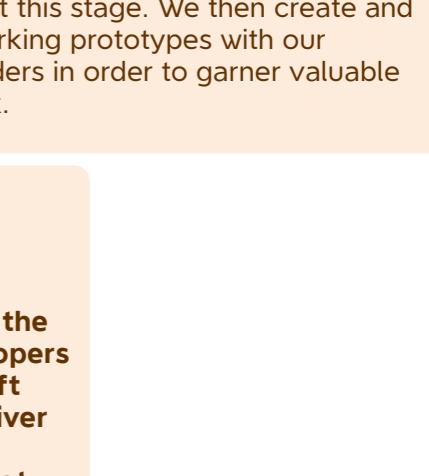

/services/development-integration

Brief :

It is never too destination its always the journey. Our team of certified developers have been working with the Microsoft Dynamics stack to develop highly integrated mission-critical enterprise-class web applications that provide real value.

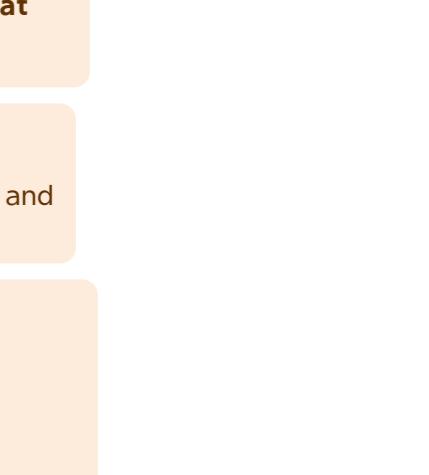

Page Header :

Our team love enterprise level projects and excel at the heavy lifting required.

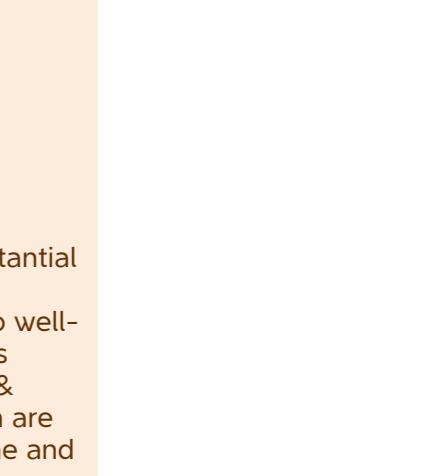

Development & Integration

Most of our build projects involve substantial custom development and integration challenges. From bespoke databases to well-known systems like Microsoft Dynamics CRM, NetWeaver Gateway, and Siebel E-Enterprise. Our team are helping our clients to digitally streamline and transform their business processes via custom API integrations.

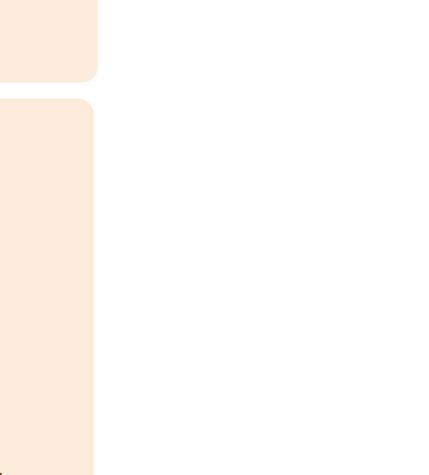

Concepts & Prototyping

Over the last number of years, we have been transitioning from ASPX and web forms to .NET MVC. Our team still have their legacy Kentico, Umbraco, Sitecore and Sitefinity Portal Engine but are exploring the new journey with Kentico, Sitecore and Episerver who have a strong focus on the cloud development model. However, if your Kentico system is built on the Kentico Portal Engine, we have a highly experienced and certified Kentico development team to support and maintain your solution going forward.

Concepts & Prototyping

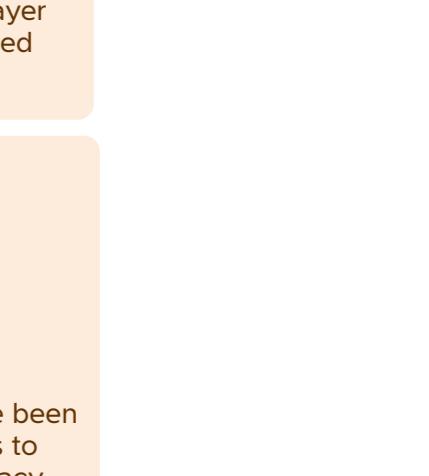

On some recent projects, we have been engaged to work alongside, and augment our clients in their digital transformation. We have even gone so far as to create a co-working process that allows us to safely and easily get involved in your projects on Kentico development best practice.

Concepts & Prototyping

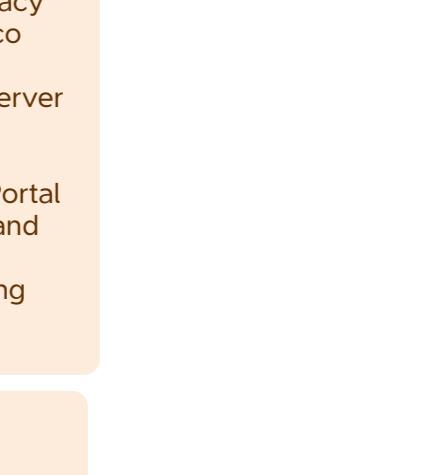

We only work with highly secure, leading enterprise-level CMS and CXM platforms such as Kentico, Umbraco, Konectal, Sitecore, and Episerver.

For a company to scale in delivering enterprise-class digital platforms to empower enterprise-class organisations, it's only right to expect that we use enterprise-class technology. We have the experience and solutions have Kentico CMS at the core. We have a strong presence in Kentico, Sitecore and Episerver (Optimizely) and can assist in evaluating what CMS or CXM platform is right for your organisation.

Concepts & Prototyping

All our developers are certified in Kentico, Umbraco, Sitecore, or Episerver (Optimizely). We have a strong presence in Kentico, Sitecore, and Episerver (Optimizely) and can assist in evaluating what CMS or CXM platform is right for your organisation.

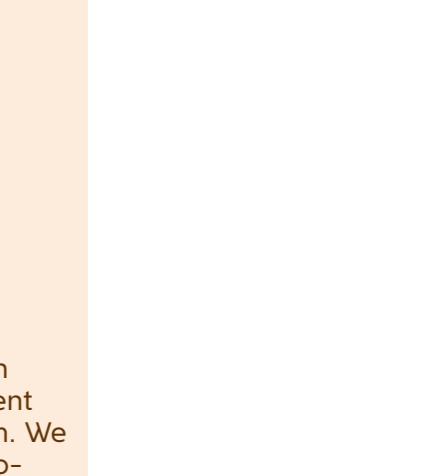

Concepts & Prototyping

As a team, we like to keep learning and are currently skilling up on Kentico and Umbraco Heartcore. It is the newest offering from Kentico and is a great alternative to the lightweight alternatives to traditional enterprise CMS and CXM platforms. It allows for a much faster development cycle and makes sites to be rapidly developed to go live quicker.
